Lab Test

September 6th, 2011

The lab tests will be held during the week of September 26th. Quads will sign up for the lab test in pairs.

The lab test will be divided in two different components:
1) A demonstration of the tutorial examples during your lab demo period.
2) A question and answer period, which will be held in my office on September 26th.

There will be separate sign up sheets for each component as the TAs will be verifying that you got the tutorial examples to function properly and that you've written the necessary makefiles, etc. during your lab demo times and I will be doing the question and answer section on Monday, September 26th. Each component will take 15-20 minutes.

I will email everyone via the class mailing list once the sign up sheets are posted (at the end of the week). _**Note**_: if you cannot make *any* of the time slots because they overlap with other classes in your schedule, please contact me _**before**_ the end of the week. Otherwise, you will be required to choose a slot on that day.
